

LPRF BlueNRG-12 Level-2 training How to use OTA

Kevin GUO - LPRF

Analog & MEMS Group

需要准备工具:

- BlueNRG-12 demo: STEVAL-IDB007V1
- BlueNRG-12 SDK, 例如SDK3.0.0及以上
- 3、 手机安装OTA的app: ST BlueDFU 最新的app: ST BLE Sensor (@android studio)

理论分析 ______

需要OTA, BlueNRG-1代码需要分为两个部分, OTA代 码部分和应用代码APP部分,又可以分为两种方式实现, 下面以其中一种为例:

OTA代码部分:只含OTA部分,不含应用层,占用 2+56=58KB代码,在flash: 0x10040000-0x1004E800 中 这部分代码需要先下载到BlueNRG-1中

APP应用代码: 用户代码User App, 从0x10050000地 址开始。通过OTA升级的代码,可用空间98KB

理论分析 —

(1) Basic BLE stack configuration

实际地址 5

检测icf文件里面app代码的起始地址

```
BlueNRG-2 OTA firmware upgrade support for service manager application memory map
   ----+ 0x20005FFF
  RAM (24K-4)
     -----+ 0x20000004
          ----+ 0x10080000
  NVM(4K)
            ----+ 0x1007F000
  User app (182K)
                  ---+ 0x10051800
  OTA Service
  Manager (70K)
                      0x10040000
                      0x100007FF
   ROM (2K)
                    -+ 0x10000000
```

修改工程

下载OTA代码到BlueNRG-1中,打开SDK3.0中BLE_OTA_ResetManager 工程,选择ServiceManager Workspace,编译并下载到BlueNRG-1 demo board中

修改工程 ___

应用代码部分UserApp, 起始地址从0x10050000开始。打开 BLE SensorDemo或者BLE Chat工程,并选择 Use_OTA_ServiceManager Workspace,编译并生成*.bin文件,并把该 *.bin文件放置到手机端

手机进行OTA _______

BlueNRG-1 demo上电,手机打开ST BlueDFU app,选择生成的*.bin文件, 然后连接demo,并下载,进度条到100%则OTA完成,板子自动复位,进 入执行应用代码。

DFU OTA Details

File name: BLE_SensorDemo_Use_OTA_ServiceManager

ver: unknown

Address: default (Size: 70839)

Percent · 21 %

再次进入OTA ____

当BlueNRG-1flash擦空,并下载了OTA代码之后,BlueNRG-1直接进入 OTA接收模式。当OTA下载完了应用代码User App之后,板子自动复位, 则BlueNRG-1进入了User App运行模式,重新上电,板子仍然是User App 模式,在这种情况下,如果要进入OTA模式,请按下PUSH1按键,板子进 入OTA,等待手机端*.bin文件的更新

```
#if ST USE OTA SERVICE MANAGER APPLICATION
   if (SdkEvalPushButtonGetState(BUTTON 1) == RESET)
      OTA Jump To Service Manager Application();
#endif /* ST USE OTA SERVICE MANAGER APPLICATION */
```
